From Test1

Email is Test1@gmail.com

Hallo, I think that Test1 is a
super great user name.

Task

1. Send a GET request to <http://35.156.88.18/users> or <http://35.156.88.18:3050/users> or <http://cileria.com:3050/users> and check the response. How can you convert this to a JavaScript object?
2. Send the GET request with AJAX to the server and parse the response.
3. Use the response to create a table of users.
4. Do 1., 2. and 3. for the comments that you can get via <http://35.156.88.18/comments> or <http://35.156.88.18:3050/comments> or <http://cileria.com:3050/comments>

Task

5. Send a POST request to
<http://35.156.88.18/users> or
<http://35.156.88.18:3050/users> or
<http://cileria.com:3050/users>
with a POST body of {name: 'Bob', username: 'Smith', email: 'bob@gmail.com'}. Use Postman for this.
6. Send the POST request with AJAX to the server based on your form data. Also please do validation before submitting data to server.
7. Check if a new user has been added.
8. Do 5., 6. and 7. for the comments that you can POST to
<http://35.156.88.18/comments> or
<http://35.156.88.18:3050/comments> or
<http://cileria.com:3050/comments>.
This time the POST body looks like {name: 'Bob', email: 'bob@gmail.com', body: 'Hallo World'}

Use

- Frameworks
 - Bootstrap
 - jQuery
- Technique
 - Closure (Singleton)
 - IIF
 - Ajax
